Here is the comprehensively revised, updated, and expanded edition of the well-established, evidence-based reference book that deals with the most recent advances in lung cancer prevention, screening, diagnosis, research, and treatment for the clinician. Edited and authored by leading authorities in the field, this Fourth Edition of the highly regarded *Lung Cancer* is better than ever –featuring nine new chapters along with seven re-formatted ones that are nearly brand new in content and approach. This Fourth Edition of *Lung Cancer*:

- Provides the very latest research in the identification of biomarkers to predict a high risk for developing lung cancer – vital for implementing screening, diagnosis, and prevention strategies
- Presents the newest lung cancer staging system, as well as updated and cutting-edge surgical and radiation therapy techniques that make local tumor control more effective and less invasive while sparing normal tissues
- Discusses combined modality therapy and new chemotherapeutic agents which are yielding higher response rates and improved survival when used in the adjuvant setting or concurrent with highly sophisticated radiation or proton treatment
