"The true method of foreseeing the future of mathematics is to study its history and its actual state." With these words Henri Poincare began his presentation to the Fourth International Congress of Mathematicians at Rome in 1908. Although Poincare himself never actively pursued the history of mathematics, his remarks have given both historians of mathematics and working mathematicians a valuable methodological guideline, not so much for indulging in improbable prophecies about the future state of mathematics, as for finding in history the origins and motivations of contemporary theories, and for finding in the present the most fruitful statements of these theories. At the time Poincare spoke, at the beginning of this century, historical research in the various branches of mathematics was emerging with distinctive autonomy. In Germany the last volume of Cantor's monumental *Vorlesungen über die Geschichte der Mathematik* had just appeared, and many new specialized journals were appearing to complement those already in existence, from Enestrom's *Bibliotheca mathematica* to Loria's *Bollettino di bibliografia e di storia delle scienze matematiche*. The annual *Jahresberichte* of the German Mathematical Society included noteworthy papers of a historical nature, as did the *Enzyklopadie der mathematischen Wissenschaften*, an imposing work constructed according to the plan of Felix Klein.
