## **House of Worship Sound Reinforcement** Jamie Rio, Chris Buono

House of Worship Sound Reinforcement provides everything you need to know to become a sound technician in a house of worship and beyond. Starting with the basic foundations of sound, you'll progress into learning how the sound in your house of worship is captured with microphones and transduced into electricity. From there, you will explore the wonders of the mixing console, where all the audio you're capturing is sent, processed, and mixed together. Next up will be a thorough examination of how sound is projected not only to the congregation but also back at the worship team through the speaker system. After delving into the world of digital processors, you will learn how to create an optimal environment for projecting sound in your worship space, which includes properly setting up your system. Finally, you will discover what it takes to maintain your system as well as how to readjust and/or create a new system for outreach events. Although the concepts in this book are complex, they are conveyed in non-technical language, so even if you have no experience with sound reinforcement, the book's contents are easy to follow and put into practice. The authors focus on real-world situations and setups and avoid discussions of physics and math, which can be confusing and intimidating. Whether you are just beginning your journey into live sound, you've been mixing at your own house of worship for a period of time, or you have years of experience already logged in, you will surely find useful information, tricks of the trade, and sound advice in this book that will serve you for years to come.
