Social Information Transmission and Human Biology (Society for the Study of Human Biology)

Social Information Transmission and Human Biology (Society for the Study of Human Biology)

Recent research has emphasized that socially transmitted information may affect both the gene pool and the phenotypes of individuals and populations, and that an improved understanding of evolutionary issues is beneficial to those working towards the improvement of human health. Equally, an improved awareness of how human behavior influences health and reproductive fitness is starting to shed new light on the processes that shape the evolution of human behavior and the human mind.

Focusing directly on these emerging trends, **Social Information Transmission and Human Biology** bridges the gap between primarily theoretical work undertaken by those with evolutionary interests and biomedical work undertaken by those dealing with practical issues in human health and demographics. Incorporating papers from a symposium organized under the auspices of the UK Society for the Study of Human Biology, this volume merges the perspectives of internationally renowned evolutionary and theoretical biologists, zoologists, anthropologists, archaeologists, psychologists, and medical researchers whose work is linked by common themes addressing how information is transmitted socially and how its transmission influences both immediate and evolutionary biological outcomes.

Emphasizes the diverse ways in which socially transmitted information impacts on human biology

To illustrate these themes, the chapters draw on models and data ranging from observations on chimpanzee populations in the wild and on the human archaeological record, to studies of contemporary humans in both developing and industrialized countries. Taking a broad approach, many of the chapters address areas of behavior that are familiar to scientists in particular fields, but do so using a variety of cross-disciplinary perspectives, which will prove stimulating for researchers in a range of academic subject areas, while helping to facilitate closer collaboration between biological and social scientists.

From reader reviews:

Jennifer Day:

People live in this new time of lifestyle always try and and must have the time or they will get lots of stress from both daily life and work. So , if we ask do people have extra time, we will say absolutely indeed. People is human not only a robot. Then we question again, what kind of activity are you experiencing when the spare time coming to anyone of course your answer will probably unlimited right. Then do you ever try this one, reading ebooks. It can be your alternative inside spending your spare time, the actual book you have read is actually Social Information Transmission and Human Biology (Society for the Study of Human Biology).

Wanda Davis:

Social Information Transmission and Human Biology (Society for the Study of Human Biology) can be one of your beginner books that are good idea. Many of us recommend that straight away because this e-book has good vocabulary that may increase your knowledge in vocab, easy to understand, bit entertaining however delivering the information. The article writer giving his/her effort to put every word into pleasure arrangement in writing Social Information Transmission and Human Biology (Society for the Study of Human Biology) although doesn't forget the main point, giving the reader the hottest and based confirm resource details that maybe you can be among it. This great information could drawn you into brand new stage of crucial imagining.

Jim Loop:

Are you kind of hectic person, only have 10 or even 15 minute in your time to upgrading your mind expertise or thinking skill possibly analytical thinking? Then you are having problem with the book than can satisfy your short time to read it because this time you only find publication that need more time to be examine. Social Information Transmission and Human Biology (Society for the Study of Human Biology) can be your answer mainly because it can be read by an individual who have those short time problems.

Jeffrey Price:

As we know that book is important thing to add our knowledge for everything. By a reserve we can know everything we would like. A book is a pair of written, printed, illustrated or blank sheet. Every year seemed to be exactly added. This e-book Social Information Transmission and Human Biology (Society for the Study of Human Biology) was filled regarding science. Spend your free time to add your knowledge about your research competence. Some people has diverse feel when they reading some sort of book. If you know how big benefit of a book, you can truly feel enjoy to read a book. In the modern era like now, many ways to get book which you wanted.
